

King Island Radio

A proposal for a **Local Community Radio Station**, to enhance the information for the people of King Island.

The possibility to combined all Emergency services, Fishermen and Farmer's information services all into a radio set-up as a volunteer organization to operate 24 hours a day if possible, this in no way would interfere with the application currently used by the emergency services but would be supplementary to them, considering if there was a major emergency the quickest way to contact people is by radio.

On any day we will all know what is going on, news of any delays in our weekly shipping, emergency breakdown procedure, road works etc. the radio would remind the public each day on local current affairs including Medical, C. W. A. and club news, latest local and overseas news, drawing on junior local talent where possible, of course you "gotta" have CDs with some good music,

The thoughts are endless, visiting V I P, ex King Islanders and people of interest giving an insight to their visit, council news, location of clubs and events, the mind boggles with the endless possibilities such as when the newspapers arrive from Tasmania or Victorian, are the planes on time or being held up because a weather all these things are information that somebody at some time needed on the Island.

Basically this radio set-up would not be that expensive, a matter of finding out what is required where it can be located and the usual technical items such as interference and strength it could be possible to receive on the standard car or household radio.

Special Note

We have the pledge of support from a number of interested parties both in technical and administration including an Auditor who would assist in the set-up of equipment and technical advice on day to day running or up grade of equipment as and when required.

We have applied to the **A.B.A.** for a frequency allocation under the regulations for a **FM band**, and advertise for a suitable qualified committee of interested residents to administrate and run the station for the benefit of the whole community.

If you wish to register your interest in this station.
