

WIRELESS INSTITUTE OF AUSTRALIA.

THE INSTITUTE CONVENTION.

EASTERN delegates to the Second Annual Wireless Institute Convention, to be held in Perth in August, will probably wish they are 20 metre signals instead of mere human beings when it comes to spending 3 or 4 days or so in the train trip over—a distance which they can usually span in about one hundredth of a second with their signals.

From indications, however, their sojourn will be a spicy one, and will certainly provide ample reward for any sort of a tiring trip.

The convention itself is to last from August 7th to 10th, and during this time the delegates' attention will be fully occupied for already about forty-seven items have been put forward for the agenda paper, covering every possible phase of institute activity.

The forthcoming convention cannot fail to be of the greatest value to Australia's Institute, and its decisions will be followed with close interest by all

experimenters. The complete agenda paper, with full details, will be published next month.

PRAHRAN AND MALVERN SECTION.

A meeting of the above was held in the Malvern Town Hall on Thursday evening, June 11th, and there was a good attendance of members.

A lecture was given by Mr. Bishop on "Various Circuits." It was very interesting and instructive, and was greatly appreciated by all who were present.

As this branch embraces a large district, viz., Prahran and Malvern, we feel sure that there are a number of wireless "fans" who would join the club. You are invited to come along and improve your knowledge of your set.

The club has a receiving set under construction which will be used for the benefit of members. The next meeting will be held in the Malvern Town Hall on June 25th, at 8 p.m.

M. SNELL, Hon. Press Correspondent,
14 St. Hubert's Road, Carnegie.

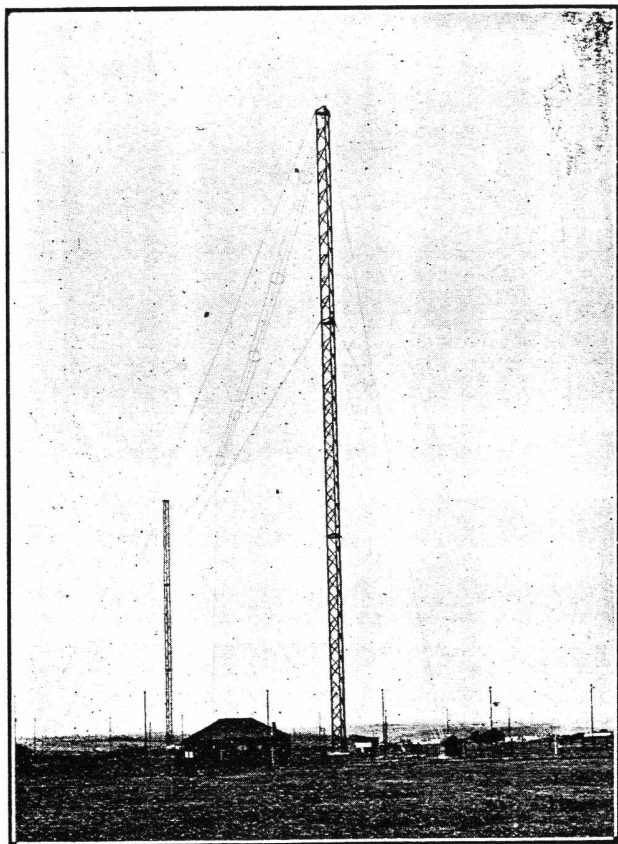

KEW AND HAWTHORN DISTRICT SECTION.

A meeting of the Kew and Hawthorn Radio Club was held in the club's room, Brougham Street, Kew, on Wednesday, June 10th.

Owing to the absence of Mr. Gadsden, Mr. Bryson was in the chair. The silver cup, donated by "Radio Broadcast," was won by the Kew and Hawthorn Radio Club, who had the best exhibit in the Wireless Exhibition recently held at Wirth's Park, was presented to the members. Various members were thanked for the exhibition of sets and help given in the exhibition. Mr. Neave (Collingwood Club) gave a very instructive lecture on "Resistance of Receiving Aerials." The club has a good roll of members, but there is still room for plenty more.

Roll up: our next meeting is 24th June, 1925.

H. W. B. BOWERS, Publicity Officer,
"Welton Dale," 153 Derby Street, Kew.

3LO's aerial itself—a magnificent affair 200 feet high—is directly responsible for the creation of the ether waves.
